TREEWOODWATER

Heirs to the expertise from the old arts and crafts of the Saint-Antoine district of Paris, from a generation shaped and enriched by the scientific R&D and technological development environments in France and abroad, we are passionate by beautiful wooden objects combining authenticity and performance and enthusiasts of wilderness adventures and vast open water spaces.

We offer a product line for outdoor water activities, featuring unique, **carefully handcrafted quality wooden canoes and paddles.**

As refined and delicate for naturally decorating interiors as they are reliable, high-performing, and durable on the water.

Through our wooden canoes and paddles, we share with you:

Quality craftsmanship, high-end creations, the result from precise, patiently executed gestures, with constant attention to details, producing one-off pieces in small series or made to order.

Our attention, our availability and your satisfaction are our way of cultivating: **trust.**

Technical objects, with a design inspired by tradition: Enhanced by modern technology for durability and performance (comfortable and ergonomic, maneuverable, stable, and lightweight) and versatility in their uses (adventure expeditions, hiking, fishing, whitewater sports, etc.).

A sustainable commitment to "Made in France" manufacturing from quality, sustainably managed local resources.

Appreciating beautiful wooden objects, the natural beauty of wood: its color, texture, and grain, characteristic of each species.

A unique aesthetic that you'll enjoy looking at, that reveals who you are and emphasises the durability of the things you appreciate. An aesthetic that also lends itself to interior design, original and unusual, warm, friendly, natural, soothing and inspiring.

A unique experience using our products for outdoor water leisures, whether solo or tandem, with family or friends, for adventure, sports or leisurely navigation, travel or fishing.

The passion for nature, an invitation to travel and adventure towards vast open water spaces, following in the footsteps of trappers and great adventurers.

(-) Canoe 4,22m

This wide, stable, lightweight canoe is ideal for solo or tandem use, for relaxing on the water, fishing, taking a leisurely stroll on calm waters to discover our exceptional natural areas, or even making your adventurous and expeditionary dreams come true.

The original beauty of the wood species and the natural variation of its grain, the respect for materials, and the meticulous attention paid to each stage of its construction and finishing make it a high-quality, unique, and original product that you will enjoy looking at.

The combination of wood and its shapes defines a stylish and elegant canoe that will add flair to your adventures and leave a lasting impression.

Its curves and characteristics make it responsive and highly maneuverable in whitewater navigation.

This robust canoe is easy to repair and requires minimal maintenance. It will be an enduring companion for moments of freedom for many generations to come.

SPECIFICATIONS

Maximum Load: 370 kg

Accessories: 2 seats, 2 handles, 1 central carrying yoke

Options: 2 watertight compartments of 17 liters with inspection hatch.

Construction: Glued strip assembly, hardwood stems and gunwales, interior and exterior hull reinforced with fiberglass coated with epoxy resin, covered with multiple layers of marine varnish for UV protection.

Materials: Cedar, Acacia, Ash.
Modular customizable options.

(-) Paddles

Range of paddles, for canoeing, kayaking, SUP in whitewater or calm waters, sports paddling, leisure, or multi-day touring, made using laminated wood assembly.

Each paddle is handcrafted with meticulous attention to details.

The preferred wood species are cedar, aspen, oak, ash, and other locally sourced woods from sustainable forestry approach, depending on the assembly pattern and the desired aesthetics, for light and flexible paddles or more rigid and powerful ones, according to the type and conditions of use.

The blade is reinforced with a fiberglass and epoxy resin lamination.

The blade edges are reinforced with a filled epoxy resin strip, providing protection for the often stressed tips.

The paddles are fully protected by an epoxy coating, with an anti-UV varnish.

For straight paddles, several handle shapes are available, in Pear or T shapes, depending on uses and ergonomic comfort.

Each of our paddle models is the result of a compromise between the density of the wood species and the epoxy resin reinforcements. It is a compromise between lightness, robustness, durability, and performance.

Each paddle is unique. The wood colors and weights are indicative due to the very nature of the material and artisanal manufacturing.

For the same species, depending on the soil on which it has grown, even within the same stand, and often even on a single specimen, the characteristics can change.

Densities and colors may vary slightly.

Respectful of wood, we make the best of what the forest has to offer.
